Graphs - [cookbook-r.com](http://cookbook-r.com) Graphs My book about data visualization in R is available! The book covers many of the same topics as the Graphs and Data Manipulation sections of this website, but it goes into more depth and covers a broader range of techniques. Plotting distributions ([ggplot2](http://ggplot2.com)) - [cookbook-r.com](http://cookbook-r.com) Histogram and density plots. The `qplot` function is supposed make the same graphs as `ggplot`, but with a simpler syntax. However, in practice, it's often easier to just use `ggplot` because the options for `qplot` can be more confusing to use. Bar and line graphs ([ggplot2](http://ggplot2.com)) - [cookbook-r.com](http://cookbook-r.com) Line graphs. For line graphs, the data points must be grouped so that it knows which points to connect. In this case, it is simple "all points should be connected, so `group=1`.

Axes ([ggplot2](http://ggplot2.com)) - Cookbook for R Setting tick mark labels. For discrete variables, the tick mark labels are taken directly from levels of the factor. However, sometimes the factor levels have short names that aren't suitable for presentation. Cookbook: `ggplot | CIN 401 > p <- ggplot (movies) + geom_histogram (aes (x = rating)) + scale_x_continuous ("Avg. rating (0-10)") + scale_y_continuous ("Count of movies with rating") > ggsave ("plot-movies-histogram.png", p, width = 6, height = 4, dpi = 100) stat_bin: binwidth defaulted to range / 30. Legends (ggplot2) - Cookbook for R The legend title "Experimental Condition" is long and it might look better if it were broken into two lines, but this doesn't work very well with this method, since you would have to put a newline character in the name of the column.`

[ggplot2](http://ggplot2.com): Cheatsheet for Visualizing Distributions | R-bloggers In the third and last of the `ggplot` series, this post will go over interesting ways to visualize the distribution of your data. Quick-R: `ggplot2` Graphs - [statmethods.net](http://statmethods.net) Graphics with `ggplot2` The `ggplot2` package, created by Hadley Wickham, offers a powerful graphics language for creating elegant and complex plots. Its popularity in the R community has exploded in recent years. Colors ([ggplot2](http://ggplot2.com)) - Cookbook for R Mapping variable values to colors. Instead of changing colors globally, you can map variables to colors "in other words, make the color conditional on a variable, by putting it inside an `aes()` statement.
